BINARY GAME USER MANUAL Oliver Perez

DESCRIPTION:

The binary game is a game where you have to conver decimal numbers to binary or binary to decimal.

FILES NEEDED:

Bin2Dec.asm, Dec2Bin.asm, Board.asm, Menu.asm, Main.asm, RandomNum.asm, Validate.asm, and SysCalls.asm.

INSTRUCTIONS MARS:

To play this game you need to have all the asm files in the same directory and make sure in MARS to have the option, 'Assemble all files in directory', enabled in order for the program to work. Then after that just assemble and run.

GAMEPLAY:

When the game is running it will display a menu in where you can choose between three modes, 1.Binary to Decimal, 2.Decimal to Binary, 3.Both(randomized each question). Make sure to choose an option displayed. It will then display the game mode the level and the line. Each level has its amount of lines/problems so level 1 has 1 line, and level 2 has 2 lines. In binary to decimal you must convert the binary given the answer must be between 0 and 255 inclusive if the answer you give is not valid it will ask again the same question. If your answer is valid but the answer is incorrect you lose and the game ends, if you are correct the game continues. In Decimal to Binary mode it will display the decimal number and 8 blank boxes. You must answer in only 1's and 0's and it must be 8 bits long if not your answer will be invalid and you will be asked again. If valid but incorrect the game ends but if correct the game continues to the next line or level. This is repeated for 10 levels until you win.
